SWE (MRI 50 YR):	68.9 in. of H ₂ O
SWE adj. (MRI 50 YR):	77.1 in. of H ₂ O

Note: For most stations the 50 yr. MRI seems realistic. However, for a few stations if this value greatly exceeds the max. value recorded then a adjusted value is calculated. This value varies linearly between 100% of the max. for stations with 50 years or more of data and 120% of max. for stations with 10 years of data. The lesser of the two values is input into the database and map.
